

BIRDS OF BODEGA HARBOR, BODEGA HEAD AND BODEGA DUNES

Area covered by this list includes all of Bodega Harbor and the Harbor edge west of Highway 1; Doran Spit; Bodega Head and Bodega Dunes up to Salmon Creek; and the adjacent waters as seen from land.

Abundance codes: **C** = common, **U** = uncommon, **R** = rare, **A** = accidental.

Status codes: **PR** = permanent resident, **SR** = summer resident, **WR** = winter resident, **M** = migrant. The listed code refers to the predominant status of each species in the list area. Many species occur occasionally in other seasons as well.

Breeding: ** denotes a species known to breed within the list area.

* denotes a species probably breeding within the list area.

Sources: This list derives in large part from the data in *Birds of Sonoma County California* by G.L. Bolander and B.D. Parmeter as revised by B.D. Parmeter in 2000 (Redwood Region Ornithological Society, Napa, CA). In particular, the large number of accidentals listed would not have been possible without Dr. Parmeter's careful record-keeping. Additional records come from censuses and observations by Bodega Marine Reserve staff and from *The Sonoma County Breeding Bird Atlas* (B. Burridge, editor. Madrone Audubon Society, Santa Rosa, CA, 1995).

Total species on list: 352
